

IMPORTANT: Investment involves risk, including the loss of principal. Investors should refer to the Prospectus and Key Facts Statement of Premia Vietnam ETF ("ETF") for details, including the risk factors. Investors should not base investment decisions on this material alone. Investors should note:

- The ETF aims to provide investment results that, before fees and expenses, closely correspond to the performance of S&P Vietnam Core Index (USD) NTR.
- **Vietnam stock exchange risks** - the Ho Chi Minh and Hanoi Stock Exchanges of Vietnam may have the right to suspend or limit trading in any security traded on the relevant exchange. The government or the regulators may also implement policies that may affect the financial markets.
- **Vietnam concentration risk** - The ETF's investment are concentrated in Vietnam, which is an emerging market, and may involve increased risks and special considerations not typically associated with investment in more developed markets, such as liquidity risks, currency risks/control, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and the likelihood of a high degree of volatility.
- **Emerging market risk** - The performance of the ETF may be affected by political developments in Vietnam, changes in government policies and changes in regulatory requirements. In addition, the regulatory framework and legal system in Vietnam may not provide the same degree of investor information or protection as would generally apply to more developed markets.
- **Risk associated with mid-capitalisation companies** - The stock of mid-capitalisation companies may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger capitalisation companies in general.
- **Foreign exchange risk and other currency distributions risk** - Underlying investments of the ETF are primarily denominated in Vietnamese Dong, therefore foreign exchange risk exists between the base currency and the underlying investments currency. Also, the ETF's base currency is in USD but has Units traded in HKD (in addition to USD). The Net Asset Value of the ETF may be affected unfavourably by fluctuations in the exchange rates between these currencies and the base currency and by changes in exchange rate controls.
- **Risks of investing in FDIs** - Risks associated with FDI include counterparty / credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. Exposure to FDI may lead to a higher risk of loss by the ETF. The ETF may suffer losses if a counterparty of the derivative contract defaults or fails to perform its obligations.
- When investing in Vietnam securities listed on the stock market or over the counter market through a Vietnam securities investment account, the ETF will be subject to Corporate Income Tax ("CIT") on a "deemed taxation" basis.
- Capital gains - CIT is imposed on the gross value of securities sold on each transaction. No relief is allowed for transaction costs and no allowance is taken for the cost of investments (i.e. the earning of actual profits is irrelevant).
- **Past Performance Risk** - As a result of the change in underlying index of the ETF on 2 May 2024, past performance of the ETF prior to 2 May 2024 is achieved under circumstances which will no longer apply from 2 May 2024. Unitholders should exercise caution when considering the past performance of the ETF prior to 2 May 2024.
- **New Index Risk** - The Index is a new index having only been launched on 25 March 2024. As such, the ETF may be riskier than other index funds tracking more established indices with longer operating history.
