

IMPORTANT: Investment involves risk, including the loss of principal. Investors should refer to the Prospectus and Key Facts Statement of Premia MSCI Vietnam ETF ("ETF") for details, including the risk factors. Investors should not base investment decisions on this material alone. Investors should note:

- The ETF aims to provide investment results that, before fees and expenses, closely correspond to the performance of MSCI Vietnam Index (NTR).
- **Vietnam stock exchange risks** - the Ho Chi Minh and Hanoi Stock Exchanges of Vietnam may have the right to suspend or limit trading in any security traded on the relevant exchange. The government or the regulators may also implement policies that may affect the financial markets.
- **Vietnam concentration risk** - The Fund's investment are concentrated in Vietnam, which is an emerging market, and may involve increased risks and special considerations not typically associated with investment in more developed markets, such as liquidity risks, currency risks/control, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and the likelihood of a high degree of volatility.
- **Emerging market risk** - The performance of the Fund may be affected by political developments in Vietnam, changes in government policies and changes in regulatory requirements. In addition, the regulatory framework and legal system in Vietnam may not provide the same degree of investor information or protection as would generally apply to more developed markets.
- **Risk associated with mid-capitalisation companies** - The stock of mid-capitalisation companies may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger capitalisation companies in general.
- **Foreign exchange risk and other currency distributions risk** - Underlying investments of the Fund are primarily denominated in Vietnamese Dong, therefore foreign exchange risk exists between the base currency and the underlying investments currency. Also, the Sub-Fund's base currency is in USD but has Units traded in HKD (in addition to USD). The Net Asset Value of the Sub-Fund may be affected unfavourably by fluctuations in the exchange rates between these currencies and the base currency and by changes in exchange rate controls.
- **Trading differences risk** - As the stock exchanges on which the Index constituents are listed may be open when Units in the Fund are not priced, the value of the Securities in the Fund's portfolio may change on days when investors will not be able to purchase or sell the Fund's Units.
- **Risks of investing in FDI** - Risks associated with FDI include counterparty / credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. Exposure to FDI may lead to a higher risk of loss by the Fund. The Fund may suffer losses if a counterparty of the derivative contract defaults or fails to perform its obligations.
- When investing in Vietnam securities listed on the stock market or over the counter market through a Vietnam securities investment account, the Fund will be subject to Corporate Income Tax ("CIT") on a "deemed taxation" basis.
- **Capital gains** - CIT is imposed on the gross value of securities sold on each transaction. No relief is allowed for transaction costs and no allowance is taken for the cost of investments (i.e. the earning of actual profits is irrelevant).

The above data is for information only. **Past performance does not guarantee future results.** Investment involves risk, including possible loss of principal. Investment in emerging market countries may involve heightened risks such as increased volatility and lower trading volume, and may be subject to a greater risk of loss than investment in a developed country. Before deciding to invest, investors should read the Prospectus and Key Fact Statements for details, including the risk factors. Investors may not get back the amount they invest. Individual stock prices/performance do not represent the return of the Fund. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost.
